Dear Valued Client and Canine Breeder,

In order for our staff to happily schedule any breeding procedures, including timing, we must first have proof that all dogs involved in the breeding:

- have been physically examined by a veterinarian within 12 months**
- have a valid up to date rabies vaccination certificate signed by the veterinarian**
- and a negative heartworm test (preferably a 4dx)**

If SVH is not your primary veterinary hospital, please have all of the above documents and full medical history (please do not include invoices) emailed, faxed, or brought to us before attempting to schedule any breeding procedures or progesterone tests.

Otherwise, please schedule appointments with us well in advance to have your animals examined, tested, and vaccinated accordingly. If a rabies vaccine is needed, please allow an appropriate amount of time (2 weeks) before breeding.

SVH will not participate in the breeding of any canines without these specifics.

Thank you for your understanding. We look forward to providing the best medical attention that your treasured pets deserve.

The Team at Suffield Veterinary Hospital
